LinkedIn: linkedin.com/in/gianna-marins-734944234

## PROFESSIONAL SUMMARY

Junior Full Stack Developer with experience in urban mobility and electric vehicle charging products (Tupi Mobilidade). I build complete applications with Python (FastAPI), Node.js, React and TypeScript, SQL and NoSQL databases, REST APIs and WebSockets. In my projects, I deliver deployed applications with JWT authentication, scheduled jobs (Celery and Redis), AI API integration, automated testing (Pytest, Jest) and CI on GitHub Actions. Experienced with Git, code review and agile methodologies (Scrum and Kanban). Fluent English.

## TECHNICAL SKILLS

**Languages:** Python, JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3
**Back-end:** FastAPI, Node.js, Express, REST APIs, WebSockets, JWT, Celery, SQLAlchemy, Alembic
**Front-end:** React, React Router, Vite, Chart.js, Bootstrap, Figma (implementing from prototypes)
**Databases:** PostgreSQL, MySQL, SQLite, MongoDB, Redis
**Testing:** Pytest, Jest, React Testing Library
**Tools and deployment:** Git, GitHub, GitHub Actions (CI), Vercel, Render, Linux, Scrum, Kanban
**Familiar with:** Angular, PHP, React Native, Android, iOS (Swift), Power BI, WordPress

## PROFESSIONAL EXPERIENCE

**Trainee (Systems Development Analyst) | Tupi Mobilidade** Dec 2023 – May 2025

- Developed features and new screens for the electric vehicle charging app with React and TypeScript, from Figma prototypes, integrated with REST APIs.
- Built a section of the website where users choose the best charging options for their needs.
- Worked on the back end with Node.js, MySQL and MongoDB and fixed incorrect production database records to keep data reliable.
- Worked on mobile (Android and iOS) with the UI/UX team and fixed performance bugs and interface issues.
- Took part in daily stand-ups and pull request reviews in agile cycles (Scrum and Kanban).

**Instructor | JFG Curso de Informática e Idiomas** Mar 2020 – Jan 2021

- Taught practical IT and English classes and provided hardware and software maintenance and support.

**Technical Support | Atento Brasil S/A** Jul 2014 – Aug 2017

- Provided level 1 technical support to end users and documented solutions in the internal knowledge base.

## PROJECTS

**VIOLET – Full Stack E-commerce** Personal project | 2025

*React*, *Python*, *FastAPI*, *SQLAlchemy*, *PostgreSQL*, *JWT*, *Pytest*, *Jest* | *Demo: violet-henna.vercel.app* | *Code: github.com/marinsnanadev/violet-ecommerce*

- Deployed online store (front end on Vercel, API on Render, PostgreSQL on Neon) with JWT authentication, PBKDF2 password hashing and a persistent cart that merges into the account at login.
- Guest and customer checkout with server-side total calculation, idempotency via Idempotency-Key to prevent duplicate orders, and detection of removed products or changed prices.
- Found and fixed an IDOR vulnerability in the cart routes. Over 50 automated back-end tests (Pytest) and front-end tests (Jest).

**LiveDesk – Real-Time Support Chat** Personal project | 2026

*Python*, *FastAPI*, *WebSockets*, *React*, *SQLAlchemy*, *Alembic*, *PostgreSQL*, *Pytest*, *GitHub Actions* | *Code: github.com/marinsnanadev/livedesk*

- Chat with real-time messaging, presence, typing indicator and ticket status and priority control, with history persisted in the database.
- Each message is saved before it is broadcast, and the front end reconnects automatically with exponential backoff without losing the draft.

- Access control through conversation and agent tokens, Alembic migrations, and CI that runs tests on SQLite and PostgreSQL, plus front-end lint and build.

**PriceWatcher – Price Monitor** Personal project | 2026

*Python*, *FastAPI*, *Celery*, *Redis*, *SQLAlchemy*, *Alembic*, *React*, *Pytest* | *Code: github.com/marinsnanadev/pricewatcher*

- Price tracking for Amazon and Mercado Livre with layered scrapers (JSON-LD, HTML and meta tags) and per-product price history.
- Scheduled checks with Celery and Redis, with retry, exponential backoff and jitter, and a log of every run (status, duration and error).
- JWT authentication and about 50 automated tests, using real saved pages as fixtures.

**Games Dashboard – AI Data Dashboard** Personal project | 2026

*React*, *Vite*, *Chart.js*, *Node.js*, *Express*, *RAWG API*, *Gemini API* | *Demo: games-dashboard-self.vercel.app* | *Code: github.com/marinsnanadev/games-dashboard*

- Dashboard that aggregates RAWG API data on the back end and sends only the calculated figures to the Gemini API, so the AI describes the pattern without inventing numbers.
- AI response validation, caching, rate limiting and timeouts on external calls, plus automated back-end tests.

## EDUCATION

**B.Sc. in Software Engineering | Universidade Cruzeiro do Sul** Sep 2023 – Sep 2027 (expected)

**Front-End Development Fundamentals (technical course) | Descomplica** 2023

**Technical High School Diploma in Computer Science | Colégio Almeida Barros** 2010 – 2012

## CERTIFICATIONS

Front-end Track, Elas + Tech (2026) | Web Development, Rocketseat (2023) | Design Thinking, UX and Agile Methodologies, Descomplica (2023) | Jornada DEV, Escola Britânica de Artes Criativas e Tecnologia (2022)

## LANGUAGES

English: fluent (reading, writing and speaking) | French: intermediate | Spanish: intermediate | Portuguese: native
